Table 1: Regressions of High-Frequency Monetary Policy Surprises on Macroeconomic and Financial News

Notes: This table reports coefficient estimates from regressions of target-rate and forward guidance (FG) surprises on macroeconomic and financial news released prior to the monetary policy announcement. Standard errors (in parentheses) are heteroskedasticity- and autocorrelation-consistent (HAC), computed using a Newey–West estimator. *, **, and *** denote significance at the 10%, 5%, and 1% levels, respectively.
Sources: Banco de México, INEGI, FRED, and Bloomberg.
