

High Frequency Surprise	Panel A. Standard HFI		Panel B. Sign- and Magnitude-Restriction Identification					
	Target-Rate Shock		Pure Target-Rate Shock		RN Shock		CBI Shock	
	Mean	(16 ^{pct} , 84 ^{pct})	Mean	(16 ^{pct} , 84 ^{pct})	Mean	(16 ^{pct} , 84 ^{pct})	Mean	(16 ^{pct} , 84 ^{pct})
Target-Rate surprise	0.50	(0.48, 0.52)						
RES			0.68	(0.47, 0.80)	-0.04	(-0.33, 0.26)	0.34	(0.06, 0.65)
FIT			-0.04	(-0.15, 0.07)	0.25	(0.17, 0.31)	0.16	(0.04, 0.27)
Stock market surprise			-4.68	(-7.17, -1.74)	-4.10	(-6.64, -1.38)	5.31	(2.47, 7.70)

Table 1: Impact Responses of Target-Rate and Stock Market Surprises

Notes: Posterior means and 16th and 84th percentiles. Units are percentage points. RES and FIT denote the residual and fitted components of the target-rate surprise, respectively. Target-rate shocks identified under both approaches are normalized to correspond to a one percentage point increase in the one-year government bond yield. CBI and RN shocks are scaled to match the size of the normalized pure target-rate shock in standard deviation units.
