

High Frequency Surprise	Panel A. Standard HFI		Panel B. Sign- and Magnitude-Restriction Identification					
	FG Shock		Pure FG Shock		RN Shock		CBI Shock	
	Mean	(16 ^{pct} , 84 ^{pct})	Mean	(16 ^{pct} , 84 ^{pct})	Mean	(16 ^{pct} , 84 ^{pct})	Mean	(16 ^{pct} , 84 ^{pct})
FG surprise	1.06	(1.01, 1.10)						
RES			1.47	(1.02, 1.73)	-0.24	(-0.87, 0.46)	0.73	(0.12, 1.41)
FIT			-0.12	(-0.35, 0.14)	0.55	(0.36, 0.65)	0.33	(0.07, 0.58)
Stock market surprise			-4.40	(-6.93, -1.57)	-4.02	(-6.51, -1.24)	5.69	(2.95, 7.88)

Table 1: Impact Responses of FG and Stock Market Surprises

Notes: Posterior means and 16th and 84th percentiles. Units are percentage points. RES and FIT denote the residual and fitted components of the FG surprise, respectively. FG shocks identified under both approaches are normalized to correspond to a one percentage point increase in the one-year government bond yield. CBI and RN shocks are scaled to match the size of the normalized pure FG shock in standard deviation units.
